GUIDELINES TO AUTHORS

- 1. Original research articles and short communications in the field of Veterinary and Animal Sciences are accepted for publication.
- 2. Papers are accepted for publication on the understanding that
- a. The paper submitted has not been published before and also it is not being considered for publication elsewhere.
- b. The authors shall also certify that they are responsible for any legal disputes arising out of infringement of copyrights, plagiarism, under or misrepresentation of facts and that the editorial board shall not be held responsible for the above said actions under any circumstances.
- c. All authors are jointly responsible for the contents published in the article. The editorial committee under no circumstances shall be responsible for the contents published in the article.
- d. The concurrence of all authors in the prescribed format given below for publication of the article is necessary.
- e. The papers on completed original research must be concise. The bulk of paper should record the actual work done by the authors.
- 3. Only online mode of submission is accepted.
- 4. The article should be typewritten (A4 page) in British English, Times New Roman font (double space) with font size 12.

- 5. The format for research article (should not exceed fifteen typed pages)
 - **Title** Font size 14,Sentence case, left aligned in bold
 - Author(s)- Initials first, font size 12, right aligned in bold
 - Affiliation- Address of institution with affiliation where the work was carried out should be mentioned at the top. Each author should be superscribed with numbers which should be explained as a foot note at the end of first page itself in italics. Phone number and email id of corresponding author (*) are to be given.
 - Abstract (about 250 words)- font size- 12, in italics
 - **Keywords**3-4 keywords- in italics
 - A short running title
 - Introduction (without heading)
 - Materials and methods(One level subheadings only, if any in sentence case, bold, italics)
 - **Results and discussion** Results and discussion should be combined to avoid repetition (One level subheadings only, if any in sentence case, bold, italics)
 - Conclusion
 - Acknowledgements if any
 - Conflict of Interest:
 - **References** Hanging indent.
- 6. The format for short communication (should not exceedfive typed pages)
 - **Title** Font size 14, Sentence case, left aligned, bold
 - Author(s)- Initials first, font size 12, right aligned in bold
 - Affiliation-Address of institution with affiliation where the work was carried out should be mentioned at the top. Each author should be superscribed with numbers which should be explained as a foot note at the end of first page itself in italics. Phone number and email id of corresponding author (*) are to be given.
 - Abstract (about 150 words)- font size- 12, in italics
 - **Keywords** 3-4 keywords- in italics
 - A short running title

- The body of the article should have no divisions. It should contain minimum tables or figures.
- Summary
- Acknowledgements if any
- Conflict of Interest:
- **References** Hanging indent.
- 7. The article should be headed with the full title, initials and surnames of all authors and the name and address of the institutionwhere the work was carried out. Authors are requested to expand each scientific abbreviation at its first occurrence in the text. Eg. Complement Fixation Test (CFT). The abbreviation presented in "System internationale" for Units and Symbols should be adopted.
- 8. All the references cited in the text of article should be listed at the end of the paper in alphabetical order with the name of all authors followed by their initials. The author(s) name, the year of publication, title of the article, name of the journal (abbreviation of journal in italics), volume number in bold typeand page numbers should be included. Abbreviation for the title of the journal should be inaccordance with the "World list of scientific periodicals".

1.Text books

Do not abbreviate the titles of books. Write them in 'Title case' italics. In the case of textbooks and theses, give total number of pages. For example: a book of 420 pages shall be listed as 420p. In the case of an edited book, give the first and last page numbers of the chapter as pp. 33-68.

<u>Book by one author</u>

Sadler, T.W. 2004. *Langman's Medical Embryology*. (9thEd.). Lippincott Williams and Wilkins, Philadelphia, 534p.

Book by two authors

Singh, U.B. and Sulochana, S. 1996. *Handbook of Histological and Histochemical Techniques*. Premier Publishing House, Hyderabad, 111p.

Book by more than two authors

Dyce, K.M., Sack, W.O. and Wensing, C.J.G. 1996. *Textbook of Veterinary Anatomy*. (2nd Ed.). W.B. Saunders Company, Philadelphia, 856p.

Book by a corporate (group) author

KVASU [Kerala Veterinary and AnimalSciencesUniversity]. 2012. Academic Handbook. (1stEd.).Kerala Veterinary and AnimalSciencesUniversity, Pookode, 172p. Note: *In-text citation* "(KVASU, 2012)."

<u>Book with an editor</u>

Fletcher, T. F. 1993. Nervous system. In: Dellmann, H.D. (ed.), *Textbook of Veterinary Histology*. (4th Ed.). Lea and Febiger, Philadelphia, pp. 87-107.

2. Journal articles

Format: Author(s), Year, Title of the article, Journal title (abbreviated, in italics), Volume number (bold), Issue No. in parenthesis, page numbers.

Name of the article in a journal shall be in 'Sentence case'. The title of a thesis shall also be like a journal article (ie. in 'Sentence case'). While writing names of journals, use standard journal abbreviations. Common journal abbreviations are given in the Annexure. Include volume and issue number, if each issue is paginated separately. In the case of journals that follow continuous page numbering for a particular volume there is no harm in omitting the issue number. Give inclusive pagination (ie. first and last page numbers of the article), eg.23-28.

General rules for journal abbreviations:

• One-word journal titles are never abbreviated, e.g., "*Nature*", "*Science*", "*Biochemistry*", "*Biotechnology*", etc.

• Some words in the titles are not abbreviated but written as such, for example: Acta, Cell, Dairy, Drug, Tissue, Methods, etc.

• Certain country or city names are abbreviated, for example: Am. for American, Br. for British, Can. for Canadian, Jpn. for Japanese, Calif. for Californian, Lond. forLondon, Camb. forCambridge, etc. However, some country names, such as India/ Indian, Sweden/Swedish, etc. are not abbreviated.

• All the abbreviations in the journal should start with a capital letter.

• Put a period after the abbreviation, for example: J. (Journal), Sci. (Science), Rev.(Review), etc.

Journal article by one author

Note: In text citation: "(Anon., 2013)."

3. Electronic and online sources

Only reliable sources may be considered while using online references. Generally, websites maintained by reputed Universities, institutes and organizations can be considered as authentic sources. The details required for electronic sources are basically the same as those required for print sources. The additional information that is required is the type of medium, the address or URL (uniform resource locator) and the date of access from the internet.

<u>Article in an online journal / e-journal</u>

Schreyer, J.H. 2012.Juvenile dentistry in dogs and cats.*Vet. Focus* [on line]. **22** (3). Available: http://www.ivis.org/journals/vetfocus/22_3/en/1.pdf. ISSN 22 [22 Jan. 2013].

Book available only on the internet

Jarrard, R.D. 2001. *Scientific Methods* [book on-line]. Dept. of Geology and Geophysics, University of Utah. Available: http://www.mines.utah.edu/geo/people/faculty/jarrard/Text/booktoc.html. [30 Oct. 2003].

Printed journal article freely available on the internet

Chowdhury, S. and Sharma, B. 2013. Transcription of gD and gI genes in BHV1-infected cells. *J. Biosci.* **37**(6): 971-977. Available: http://www.ias.ac.in/jbiosci/dec2012/971.pdf. [22 Jan. 2013].

4. More than one book/journal article by the same author/s in different years

• In the case of entries by the same author in different years, arrange chronologically by the year of publication, the earliest first.

• References with the same first author and different second and subsequent authors are listed alphabetically by the surname of the second author and then by the surname of the third author and so on.

• References with the same group of authors in the same identical order are entered chronologically by the year of publication, the earliest first.

5. More than one book/journal article by the same author in the same year

• References by the same author (or by the same group of authors in identical order) with the same publication year are listed alphabetically by the first word of the title following the year; lower case letters (a, b, c and so on) are included after the year within the parenthesis.

Kumar, P., Kumar, S. and Singh, Y. 1995a. Anatomy of the pineal gland in domestic animals. *Indian J. Vet. Anat.***7**: 1-10.

Kumar, P., Kumar, S. and Singh, Y. 1995b.Topography and histomorphology of pineal gland in young goat.*Indian J. Anim. Sci.*65: 633-635.

• If the articles are published in the same journal arrange by volume number. Chronologically, and if in the same volume, arrange by page number.

- 9. Tables and figures should bear the reference number (Table 1, Table 2, Fig. 1, Fig. 2 etc) and the title in Sentence case should be written on the top of table and below the Figure. Page limit is inclusive of figures and tables.Colour illustrations are accepted.
- 10. Tables should be typed at appropriate place in the text with only essential data. The size of the tableand figures as far as possible should be adjusted for double column printing. Tables and figures should be text wrapped tight to avoid misplacement in the text.
- 11. Papers will be subjected to editorial revision that may be dictated by the general rules governing the presentation in the journal. The Editorial board retains the right to accept the papers and no reason might be given in case of non-acceptance of articles.
- 12. An author declaration certificate in the prescribed format signed by all authors should be uploaded while submitting the article online. (Download author declaration certificate here). Legal disputes if any should be mentioned.
- 13. Conflict of interest should be declared
- 14. The article will be returned to the authors after review. It should be resubmitted after making corrections according to referee's comments. Final correction of the article should be strictly in accordance with the revisions suggested by the referee. Authors are not permitted to do any major additions or deletions in the article after the referee correction.
- 15. Processing fee and Publication charges: A processing fee of Rs.500/-(Rupees: Five hundred only) should be paid through NEFT/Account transfer/ UPI at the time of submission of article. On acceptance of article, publication fee of Rs. 2,000/- (Rupees Two thousand only) should be paid online for final publication.

16. Account Details : Account Name: Editor, JVAS Account No. : 67218495193 Bank Name: State Bank of India, Ollukkara Branch IFSC : SBIN0070210

- 17. All correspondences pertaining to the journal should be addressed to the Editor, Journal of Veterinary & Animal Sciences, College of Veterinary & Animal Sciences. Mannuthy, Thrissur- 680 651, Kerala, India. You can reach the editor at editorvetj@kvasu.ac.in.
- 18. Article reference number provided in the acknowledgement should be quoted in all correspondences pertaining to the article.

Abstract

Medicinal plants are precious source of bioactive compounds which possess a range of beneficial properties and they remain the major source of medicine for a large proportion of population in this world. From ancient time, Crataevanurvala was used as a vital herb in Ayurvedic system of medicine. According to Unani system of medicine, bark of C. nurvala is used as an appetite stimulant and as an agent to decrease the secretion of bile and phlegm. In the present study, methanol extract of stem bark of C. nurvala was analysed for preliminary phytochemicals and chemical profiling of the extract was illustrated using gas chromatography and mass spectrometry (GC-MS) analysis. The phytochemical analysis revealed that the plant extract contained alkaloids, steroids and triterpenoids. Gas chromatography mass spectrometry analysis determined the presence of different compounds of biological importance. The identification and characterisation of the phytoconstituents in the extract could pave the way for the discovery of new

drugs for various ailments.

Keywords: Crataevanurvala, triterpenes, alkaloids, steroids

Running title: Qualitative and quantitative analysis of Crataevanurvala stem bark

Medicinal plants are valuable source of naturally active phytochemicals. They are the naturally occurring chemical compounds found in plants which provide health benefits for humans and animals. These compounds commonly known as secondary plant metabolites have been attributed to have different biological properties providing protection against various diseases.

*Crataevanurvala*Buch-Ham., commonly known as Varuna, Neermathalam, BarnaChal, belonging to the family of Capparidacea, is a moderate sized deciduous tree. A variety of medicinal properties have been reported for *C. nurvala* and its stem bark. It has been traditionally used in treating blood flow, waste elimination, breathing problems, fever, metabolic disorders, joint lubrication and wound healing (Vashistet al., 2020). Mekapet al. (2011) determined the antiurolithiatic activity of *C. nurvala*. Root and bark are documented to be laxative, lithotripsic and was found to increase the appetite and biliary secretion (Fletcher, 1993; Maliniet al., 1995). The ethanol and aqueous extracts of the dried stem bark of *C. nurvala* have been found to possess significant anti-fertility effects in rats (Bhaskaret al., 2009). The antidiarrhoeal activity of ethanol extracts of *C. nurvala* stem bark has been reported by Inayathullaet al. (2010). *Crataevanurvala* stem bark extract exhibited antidiabetic activity against alloxan induced diabetic albino rats in the study done by Sikarwar and Patil (2010). Thus, the present study was carried out to evaluate the various phytochemical constituents present in the bark of methanol extract of *C. nurvala* which would be helpful to delineate the various biological activities shown by the stem bark.

Materials and methods

Plant collection and identification

The bark of *C. nurvala* was collected from Valluvanad, Palakkad, Kerala (Fig. 1 and 2). The collected plant material was identified and its authenticity was confirmed by Raw Material Herbarium and Museum (RHMD), NISCAIR, New Delhi, India.

Fig. 1. Leaves and flower of *Crataevanurvala*Buch-Ham.

Fig. 2. Bark of *Crataevanurvala*Buch-Ham.

Preparation of extracts

Freshly collected bark of *C. nurvala* were cleaned to remove adhering dust and then dried under shade. The dried bark was coarsely powdered using an electric pulveriser and the powder obtained was extracted using a Soxhlet apparatus with methanol at 67 °C. The methanol extract was then concentrated using a rotary vacuum evaporator under reduced pressure and temperature (40 °C). The yield of the extract was calculated using the formula: Yield value (%) = Extracts obtained/ Total amount of crude drug \times 100, and kept under refrigeration in an airtight container after complete evaporation of the solvent for further use.

Qualitative phytochemical analysis

The extracts were tested for the presence of bioactive compounds using methods described by Harborne (1998). Fifty milligrams of the extract were dissolved in 3 mL of chloroform. Few drops of concentrated sulphuric acid were added and the solution was allowed to stand. Formation of red colour directed the presence of steroids.

GC-MS analysis

The active phytochemical principles of methanol extract of C. nurvalawas analysed using GC-MS system of Centre for Analytical Instrumentation- Kerala(CAI-K), Kerala Forest Research Institute (KFRI), Peechi, Kerala. The GC-MS analysis was carried out on Gas chromatography Mass Spectrometer (Shimadzu GC-MS, Japan, QP2010SE) with a mass range of 1.5- 1000 m/z. Helium at a flow rate of 1 mL/ min was used as the carrier gas. The oven temperature was maintained at 80 °C for 4 min then increased to 280 °C in 6 minutes. The injector temperature was260 °C and andtotalanalysistimewas50minutes. Aliquotof the extract (0.4 µL) was injected into the chromatographic column after obtaining a clear baseline. The interpretation of the mass spectrum of GC-MS was guided using the database of the National Institute of Standards and Technology (NIST 11) and WILEY 8. The spectrum of the unknown compounds was related with the spectrum of the known compounds. The name and molecular weight of the compounds of the tested materials were ascertained.

Results and discussion

Qualitative phytochemical analysis

The qualitative phytochemical screening of methanol extract of stem bark of *C. nurvala* showed the presence of steroids, triterpenoids and alkaloids (Arunima, 2011). Phytochemical screening of methanol extract of stem bark of *C. nurvala* revealed the presence of steroid and terpenoids as well as alkaloids, phenolics, flavanoids, tannins and saponins (Hade *et al.*, 2016) which supported our results. Sodipo*et al.* (2000) have reported that alkaloids have been

associated with medicinal uses for centuries and one of their common biological properties is their cytotoxicity. Huang*et al.* (2016) isolated six phytosteroids and nine known triterpenoids from the leaves of *Chisochetoncumingianus* in which chisopanoidsE and F exhibited potent cytotoxicities towards MCF-7 with IC₅₀ values of 3.24 ± 1.39 and $8.85 \pm 4.73 \mu$ M, and were further proved to prevent the cell proliferation, mainly by inducing apoptosis.Haque*et al.* (2008) isolated two terpenoids, phragmalin triacetate and lupeol from ethyl acetate extract of stem bark of *C. nurvula* by chromatographic techniques. Jain *et al.* (2016) suggested that terpenoids were capable of inhibiting NFkB through different mechanisms. Khatun*et al.* (2015) evaluated the antioxidant, anthelmintic, antimicrobial and phytochemical assessment of ethanolic extract of *C. nurvala* leaves and displayed the presence of alkaloids, flavonoids, reducing sugar, saponins, steroids, tannins. The above mentioned phyto constituents are described to exhibit various pharmacological activities (Table 1).

GC- MS analysis

The results of GC-MS analysis of methanol extract revealed the presence of twenty-one compounds. The GC-MS chromatogram of twenty-one compounds is depicted in Fig. 3. Thymine, 3-hydroxy-2,3-dihydromaltol, 5-hydroxymethylfurfural, n-methyl-3-hydroxymethyl pyrrolidine-2-one, cytidine, methyl pentofuranoside, undecane, 6,6-dideutero-5-methyl-, 2,4-ditert-butylphenol and 3-deoxy-d-mannoic lactone were the major compounds.

Fig. 3. GC-MS chromatogram of methanol extract of *C. nurvala*stem bark

Balamurugan *et al.* (2019) havedone the chemical profiling ofmethanolbark extract of *C. nurvala*using GC-MS technique. The study revealed the presence of 8 components such as lup-20 (29)-en-3ol, 2-hydroxy-4methoxybenzaldehyde, methoprene, 1'-acetonaphthone, 1, 2-bis (Trimethylsilyl) benzene, pivalate, cyclotrisiloxane, limonen-6-ol and 4-hexadecen-6-yne.

The recognised major compounds in our study possess some significant biological activities for future drug development. Zhao et al. (2013) showed that 5-hydroxymethylfurfural (5-HMF) induced apoptosis and G0/G1 cell cycle arrest in human melanoma A375 cells. Takuliet al. (2020) elucidated the antioxidant and antibacterial activity of Woodwardiaunigemmata (Makino) along with chemical characterisation which revealed the presence of 3-hydroxy-2,3-dihydromaltol in GC-MS analysis. Aziziet al. (2006) performed fast gas chromatography/ time of flight mass spectrometry (TOF-GCMS) which identified N-methyl-3-hydroxymethylpyrrolidin-2-one from the oil extract of Pithecellobiumjiringan jack seeds which was found to abolish excess free radicals and counteract oxidative damage. Suet al. (2005) evaluated the antioxidant activity of methanol extract of Morindacitrifolia (Noni) fruits and the purification of its butanol soluble partition of methanol extract contained isolates like cytidine. Shaheedet al. (2018) identified methyl pentofuranoside, also known as alpha-d-mannofuranoside, from methanolic fenugreek seed extract and determined its antibacterial activity against Streptococcus agalactiae, Escherichia coli, Enterococcus cloacae and Proteus mirabillis. Gas chromatography mass spectroscopic analysis exhibited the presence of undecane,6,6-dideutero-5-methyl- in Nigella sativa, Allium sativum, Propolis and Oleaeuropaea mixture which was depicted as antibacterial and antifungal agent (Bintanget al., 2018). Chuahet al. (2015) suggested that 2,4-di-tert-butylphenolinduced oxidative stress through the generation of reactive oxygen species, which cause lipid peroxidation and membrane damage in root tissues and chloroplast in leaf tissues, thus leading to increased levels of antioxidant enzymes. Shobana et al. (2009)in their study identified compounds such as 3-deoxy-d-mannoic lactone and thymine from two varieties of garlic (ophioscordon and sativum) which was found to possess antibacterial activity

against enteric pathogens. The aforesaid isolated compounds from the methanol extract of *C*. *nurvala* stem bark seemed to own the reported biological activity and further study of these phytoconstituents may demonstrate the medicinal importance in future. The biological activities of other compounds have not been reported so far and more study of these phytoconstituents might validate the significant medicinal features in forthcoming.

Conclusion

The association among the phytochemical constituents with their biological activities is now being the matter of advanced thought. *Crataevanurvala* is a deciduous medium sized tree, traditionally used in the treatment of kidney stones, urinary tract infection and prostate related disorder. The present study has revealed *C. nurvala* to be rich in various phytochemicals. The existence of these phytochemical constituents indicated that the bark of the plant could be used in a variety of ways which would be beneficial to the population. Gas chromatography mass spectroscopic analysis revealed the presence many compounds presumed to be responsible for eliciting the traditional medicinal activities of the bark of the plant.

Abstract

Haemonchuscontortus commonly called as stomach worm or wire worm of ruminants inhabit the abomasum and is considered as one of the economically important gastrointestinal strongyles in goats. In the present study, H. contortus was identified by PCR using the primers targeting partial 5.8S and partial internal transcribed spacer region 2 (ITS-2). Adult worms were identified morphologically and genomic DNA was extracted using DNeasy Blood and Tissue kit (QIAGEN, Germany). Gradient PCR protocol was standardised using the extracted genomic DNA. Ten-fold serial dilution of adult DNA was used to analyse the minimum detection limit and the products were amplified upto tenth dilution. Cross reaction of primer sets was checked using the DNA extracted from predominant adult strongyles like Oesophagostomumcolumbianum and Trichostrongyluscolubriformis and no cross reaction was seen at the optimum annealing temperature ($60.7^{\circ}C$)

Keywords: Haemonchuscontortus, goats, PCR, ITS-2

Short Running Title: Molecular identification of Haemonchuscontortusin goats

Haemonchuscontortus belong to Trichostrongylidae family and are commonly called as stomach worm or wire worm of ruminants. The adult worms attach to the abomasal mucosa of small ruminants and due to its haematophagus nature it causes anaemia, jowl oedema and even death in young ones. Adult worms are identified based on morphological features. But identification of nematode species based on features of strongyle egg is difficult during coprological examination. Coproculture aided in species identification but it takes seven to ten days to identify the infective larvae (Fletcher, 1993). Hence, molecular identification was undertaken in this study as a tool for species level identification.

Table 1. Composition of reaction mix for PCR to identify infective larvae of H. contortus

Components	Quantity (µL)
10 X PCR buffer (without MgCl ₂)	2.5
dNTP (10 mM each)	0.50 (200µM each)
Primer forward	1(10 pmol)
Primer reverse	1 (10 pmol)
Magnesium chloride (25 mM)	1.50 (1.5mM)
<i>Taq</i> polymerase (5 IU/µL)	0.20 (1U)
DNA template	5
Nuclease free water	13.3
Total	25

After performing gradient PCR, the amplicons were subjected to agarose gel electrophoresis in 1.5 per cent agarose gelat 80V, 400mA for 35 min and the gel was visualised in Gel DocTMEZ imager and documented using Image lab software. The amplicons were purified and sequenced at AgriGenom labs private limited, Cochin using Sanger's dideoxy nucleotide chain termination method.

Male tail end had well developed bursa with elongate lateral lobes which was supported by an asymmetrical dorsal lobe. Dorsal lobe was placed on the left lateral lobe which was supported by an inverted Y shaped dorsal ray. Whereas, female had barber's poleappearance which was due the coiling of white ovaries wound around the red intestine(Soulsby, 1982).*Haemonchuscontortus*has been identified as the predominant strongyle species in goats in different places including Kerala (Deepa, 2005), North-West India (Kumar *et al.*, 2008) Malaysia (Chandrawathani*et al.*, 2009), Kashmir (Irfan-ur-Rauf-Tak*et al.*, 2013) and Ethiopia (Chalchisa*et al.*, 2015).

Sensitivity of *H. contortus* primer sets was checked using ten-fold serial dilution and the ability of primers to amplify minimum DNA concentration was analysed. The initial concentration of DNA used for sensitivity study was 4.7 ng/ μ L and ten-fold serial dilution was performed. PCR products were amplified upto tenth dilution which showed that the primer pairs could amplify DNA with minimum concentration of 4.7 ag/ μ L (attogram per microlitre) (Fig. 1).

Fig. 1.Ampliconsof *H. contortus* Lane M: 100 bp ladder Lane 1-10: Ten-fold serial dilution *H. contortus*DNA

The specificity of primer was cross checked with DNA of other important strongyles like *Oesophagostomumcolumbianum* and *Trichostrongyluscolubriformis* to detect the cross amplification between species.

Summary

The study forms the basis for developing copro-polymerase chain reaction for detecting *H. contortus* infection in goats. Specific detection of this pathogen from clinical samples would aid in initiating timely control measures.
